

代码安全基础

参数接收

PHP语言 第3-3课

- 了解参数传递与接收的原理
- 认识% POST[]和% GET[]
- 能够在PHP页面中接收HTML表单传递的参数

在HTML页面中，可以通过表单元素定义一些字段，并通过用户的输入为字段赋值。当用户将表单提交到另一页面时，表单中的字段及字段值会以参数的形式传送到目标页面当中。

在目标页面中，要想使用表单传送过来的参数，就需要有能够表示参数信息的变量

`$_GET[]`

该变量中用来存放get方式传递的参数

`$_POST[]`

该变量中用来存放post方式传递的参数

The image features a central figure of a person wearing a black hoodie, with their right hand pressed against their forehead in a gesture of stress or contemplation. The background is a vibrant blue digital landscape. It includes a glowing globe on the right side, a network of interconnected nodes and lines, and several padlock icons scattered throughout, suggesting themes of cybersecurity or digital privacy. The overall aesthetic is futuristic and high-tech.
